ABSTRACT:

PURPOSE: To obtain the titled adhesive having improved adhesiveness, heat resistance of solder, self-extinguishing properties and tracking properties, by blending a thermosetting resin consisting of polyvinyl butyral and a phenol-formaldehyde resin of resol type with a specific amount of a brominated epoxy resin.

CONSTITUTION: (A) 100pts.wt. thermosetting resin consisting of polyvinyl butyral and a phenol-formaldehyde resin of resol type is blended with (B) 10~200pts.wt. brominated epoxy resin (preferably 200~1,000 epoxy equivalent and 20~55% bromination ratio) to give the aimed adhesive.

ABSTRACTED-PUB-NO: JP63086780A

BASIC-ABSTRACT: Adhesive comprises 100 pts. wt. thermosetting resin blend of
polyvinyl butyral resin and phenol/formaldehyde resin of resol type and 10-200
pts. wt. brominated epoxy resin.

The brominated epoxy resin has pref. epoxy equiv. of 200-1000 and bromination
deg. of 20-55%.

USE/ADVANTAGE - It has high adhesion, high resistance to heat on soldering and
tracking and high self-extinguishing activity. It is used as a base board for
electronic parts secured by inserting terminals of electronic parts through
drilled through-holes and immersing it into a molten solder bath.

In an example, polyvinyl butyral resin (60 pts. wt.) and phenol/ formalin
resin of resol type (40 pts. wt.) were dissolved into acetone to provide a
20%
soln. The soln. was added with brominated epoxy resin of bisphenol A type (10
pts. wt. per 100 pts. wt. of solids in the soln.). 35 Micron thick Cu foil
was coated with the adhesive in dry thickness of 30 g/m2 and hot pressed
together with paper impregnated with phenol resin to provide a Cu-lined
laminated sheet having a peeling strength of 1.7 kg/cm2 as measured by JIS
C-6481 and soldering resistance at 260 deg.C of 20 as measured by JIS C-6481.
